

- Lab 1: Create a new database named school_db and a table called students with the following columns: student_id, student_name, age, class, and address.

Ans:

```
CREATE DATABASE student_db;
```

```
CREATE TABLE student(
    student_id int,
    student_name text,
    age int,
    class text,
    address text
);
```

| student_id | student_name | age | class | address |
|------------|--------------|-----|-------|---------|
|------------|--------------|-----|-------|---------|

- Lab 2: Insert five records into the students table and retrieve all records using the SELECT statement.

Ans:

```
INSERT INTO student VALUES(1,'ram',18,' maths','ahmedabad'),(2,'syam',19,'
chemistry','surat'),(3,'sita',21,' pysics','vadodra'),(4,'lakshman',20,'
biology','ahmedabad'),(5,'hanuman',18,'maths','surat');
```

| student_id | student_name | age | class | address |
|------------|--------------|-----|----------|-----------|
| 1 | ram | 18 | maths | ahmedabad |
| 2 | syam | 19 | chemisty | surat |
| 3 | sita | 21 | pysics | vadodra |
| 4 | lakshman | 20 | biology | ahmedabad |
| 5 | hanuman | 18 | maths | surat |

- Lab 1: Write SQL queries to retrieve specific columns (student_name and age) from the students table.

Ans:

```
SELECT student_name,age FROM student;
```

| student_name | age |
|--------------|-----|
| ram | 18 |
| syam | 19 |
| sita | 21 |
| lakshman | 20 |
| hanuman | 18 |

- Lab 2: Write SQL queries to retrieve all students whose age is greater than 10

Ans:

```
SELECT age FROM student WHERE age>10;
```

| age |
|-----|
| 18 |
| 19 |
| 21 |
| 20 |
| 18 |

• **Lab 1: Create a table teachers with the following columns: teacher_id (Primary Key), teacher_name (NOT NULL), subject (NOT NULL), and email (UNIQUE).**

Ans:

```
CREATE TABLE teacher(
  t_id int PRIMARY KEY,
  t_name text NOT null,
  subject text NOT null,
  email text UNIQUE
);
```

INSERT INTO teacher

```
VALUES(1,'rakeshsir','java','rakesh@gmail.com'),(2,'rmeshsir','python','rmesh@gmail.com'),(3,'bhikhasir','c++','bhikha@gmail.com'),(4,'shilpamem','javascript','shilpa@gmail.com'),(5,'shilymem','php','shily@gmail.com');
```

| t_id | t_name | subject | email |
|------|-----------|------------|------------------|
| 1 | rakeshsir | java | rakesh@gmail.com |
| 2 | rmeshsir | python | rmesh@gmail.com |
| 3 | bhikhasir | c++ | bhikha@gmail.com |
| 4 | shilpamem | javascript | shilpa@gmail.com |
| 5 | shilymem | php | shily@gmail.com |

• **Lab 2: Implement a FOREIGN KEY constraint to relate the teacher_id from the teachers table with the students table.**

Ans:

```
CREATE TABLE student1(
  student_id int PRIMARY KEY,
  student_name text,
  t_id int,
  FOREIGN KEY (t_id) REFERENCES teacher(t_id));
```

| student_id | student_name | age | class | address |
|------------|--------------|-----|----------|-----------|
| 1 | ram | 18 | maths | ahmedabad |
| 2 | syam | 19 | chemisty | surat |
| 3 | sita | 21 | pysics | vadodra |
| 4 | lakshman | 20 | biology | ahmedabad |
| 5 | hanuman | 18 | maths | surat |

| student_id | student_name | t_id |
|------------|--------------|------|
| 1 | ram | 5 |
| 2 | syam | 3 |
| 3 | sita | 1 |
| 4 | lakshman | 4 |
| 5 | hanuman | 2 |
| 6 | sankar | 2 |

- **Lab 1: Create a table courses with columns: course_id, course_name, and course_credits. Set the course_id as the primary key.**

Ans:

```
CREATE TABLE course(
  course_id int PRIMARY KEY,
  course_name text,
  course_credit INT);
```

| course_id | course_name | course_credit |
|-----------|-------------|---------------|
|-----------|-------------|---------------|

- **Lab 2: Use the CREATE command to create a database university_db.**

Ans:

```
CREATE DATABASE university_db;
```

- **Lab 1: Modify the courses table by adding a column course_duration using the ALTER command.**

Ans:

```
ALTER TABLE course ADD course_duration int;
```

| course_id | course_name | course_credit | course_duration |
|-----------|-------------|---------------|-----------------|
|-----------|-------------|---------------|-----------------|

- **Lab 2: Drop the course_credits column from the courses table.**

Ans:

```
ALTER TABLE course DROP COLUMN course_credit;
```

| course_id | course_name | course_duration |
|-----------|-------------|-----------------|
|-----------|-------------|-----------------|

- Lab 1: Drop the teachers table from the school_db database

Ans:

[DROP TABLE](#) teacher;

- Lab 2: Drop the students table from the school_db database and verify that the table has been removed.

Ans:

DROP TABLE student1;

[DROP DATABASE](#) student_db;

- Lab 1: Insert three records into the courses table using the INSERT command.

Ans:

INSERT INTO course VALUES('java',60000),('python',70000),('react',65000);

| c_name | c_cost |
|--------|--------|
| java | 60000 |
| python | 70000 |
| react | 65000 |

- Lab 2: Update the course duration of a specific course using the UPDATE command.

Ans:

[UPDATE](#) course [SET](#) c_duration=8 WHERE c_name='java';

UPDATE course SET c_duration=9 WHERE c_name='python';

UPDATE course SET c_duration=10 WHERE c_name='react';

| c_name | c_cost | c_duration |
|--------|--------|------------|
| java | 60000 | 8 |
| python | 70000 | 9 |
| react | 65000 | 10 |

- Lab 3: Delete a course with a specific course_id from the courses table using the DELETE command.

Ans:

```
DELETE FROM course WHERE c_name='java';
DELETE FROM course WHERE c_name='python';
DELETE FROM course WHERE c_name='react';
```

• **Lab 1: Retrieve all courses from the courses table using the SELECT statement.**

Ans:

[SELECT](#) * FROM course1;

| c_id | c_name | c_cost | c_duration |
|------|--------|--------|------------|
| 1 | python | 70000 | 6 |
| 2 | java | 60000 | 7 |
| 3 | c++ | 55000 | 8 |
| 4 | c | 50000 | 9 |

• **Lab 2: Sort the courses based on course_duration in descending order using ORDER BY.**

Ans:

SELECT * FROM course1 ORDER BY c_duration DESC;

| c_id | c_name | c_cost | c_duration |
|------|--------|--------|------------|
| 4 | c | 50000 | 9 |
| 3 | c++ | 55000 | 8 |
| 2 | java | 60000 | 7 |
| 1 | python | 70000 | 6 |

• **Lab 3: Limit the results of the SELECT query to show only the top two courses using LIMIT.**

Ans:

[SELECT](#) * FROM course1 c_cost LIMIT 2;

| c_id | c_name | c_cost | c_duration |
|------|--------|--------|------------|
| 1 | python | 70000 | 6 |
| 2 | java | 60000 | 7 |

• **Lab 1: Create two tables: departments and employees. Perform an INNER JOIN to display employees along with their respective departments.**

Ans:

```
SELECT department.d_name,emp.e_name,department.d_id FROM department INNER JOIN emp ON
department.d_id=emp.d_id;
```

| d_name | e_name | d_id |
|----------------|--------|------|
| purchasing | kishan | 4 |
| it | rohan | 2 |
| it | meru | 2 |
| administration | akash | 1 |
| sales | mayer | 6 |
| purchasing | dev | 4 |

- Lab 2: Use a LEFT JOIN to show all departments, even those without employees.

Ans:

[SELECT](#) departmenr.d_name,emp.e_name,departmenr.d_id FROM departmenr [LEFT](#) JOIN emp ON de
partmenr.d_id=emp.d_id;

| d_name | e_name | d_id |
|----------------|--------|------|
| administration | akash | 1 |
| it | rohan | 2 |
| it | meru | 2 |
| shipping | NULL | 3 |
| purchasing | kishan | 4 |
| purchasing | dev | 4 |
| accounting | NULL | 5 |
| sales | mayer | 6 |

- Lab 1: Group employees by department and count the number of employees in each department using GROUP BY.

Ans:

[SELECT](#) d_name,[COUNT](#)(name) FROM emp1 GROUP BY d_name;

| d_name | COUNT(name) |
|---------|-------------|
| acc | 1 |
| it | 3 |
| seals | 1 |
| shipind | 1 |
| shiping | 1 |

- Lab 2: Use the AVG aggregate function to find the average salary of employees in each department.

Ans:

[SELECT](#) [AVG](#)(salary) AS avgsalary FROM emp1;

avgsalary

46428.5714

- Lab 1: Write a stored procedure to retrieve all employees from the employees table based on department.

Ans:

```
CREATE PROCEDURE ins1(id int,name text,d_name text)
```

```
BEGIN
```

```
INSERT INTO emp VALUES(id,name,d_name);
```

```
End
```

```
CALL ins1(1,'meru','it');
```

```
CALL ins1(2,'rohan','it');
```

```
CALL ins1(3,'kishan','salse');
```

| id | name | d_name |
|----|--------|--------|
| 1 | meru | it |
| 2 | rohan | it |
| 3 | kishan | salse |

- Lab 2: Write a stored procedure that accepts course_id as input and returns the course details.

Ans:

Delimiter \$\$

```
Create procedure t_13( in l int , out course_d text)
```

```
Begin
```

```
Select coursedetail into course_d from course_1 where i=course_id;
```

```
End
```

```
Call t_13(1,@coursedetail);
```

```
Select @coursedetail;
```

- Lab 1: Create a view to show all employees along with their department names.

Ans:

```
CREATE VIEW v1 AS SELECT name,d_name FROM emp1;
```

```
SELECT * FROM v1;
```

| name | d_name |
|--------|---------|
| hitesh | it |
| nimesh | it |
| suresh | acc |
| gitesh | seals |
| ganesh | shiping |
| akash | shipind |
| jitesh | it |

- Lab 2: Modify the view to exclude employees whose salaries are below \$50,000.

Ans:

```
CREATE VIEW v12 AS SELECT * FROM emp1 WHERE salary >= 50000;
SELECT * FROM v12;
```

| id | name | d_name | salary |
|----|--------|---------|--------|
| 1 | hitesh | it | 50000 |
| 2 | nimesh | it | 55000 |
| 6 | akash | shipind | 60000 |
| 7 | jitesh | it | 55000 |

- Lab 1: Create a trigger to automatically log changes to the employees table when a new employee is added.

Ans:

```
CREATE TRIGGER t1 AFTER insert ON em FOR EACH ROW BEGIN INSERT INTO
emdata(id,name,salary,pro) VALUES(new.id,new.name,new.salary,'insert record'); END
```

```
INSERT INTO em VALUES(1,'ram',30000),(2,'shyam',35000);
```

```
INSERT INTO em VALUES(3,'ganesh',50000);
```

| id | name | salary | td | pro |
|----|--------|--------|---------------------|---------------|
| 1 | ram | 30000 | 2025-01-16 21:08:21 | insert record |
| 2 | shyam | 35000 | 2025-01-16 21:08:21 | insert record |
| 3 | ganesh | 50000 | 2025-01-16 21:10:51 | insert record |

- Lab 2: Create a trigger to update the last_modified timestamp whenever an employee record is updated.

Ans:

| id | name | salary | td | pro |
|----|--------|--------|---------------------|---------------|
| 1 | ram | 30000 | 2025-01-16 21:08:21 | insert record |
| 2 | shyam | 35000 | 2025-01-16 21:08:21 | insert record |
| 3 | ganesh | 50000 | 2025-01-16 21:10:51 | insert record |

```
CREATE TRIGGER t2 AFTER UPDATE ON em FOR EACH ROW BEGIN INSERT INTO emdata(id,name,salary,pro) VALUES (new.id,new.name,new.salary,'update record'); END;
```

```
UPDATE em SET name='suresh' WHERE id=3;
```

```
UPDATE em SET salary=65000 WHERE id=3;
```

| id | name | salary | td | pro |
|----|--------|--------|---------------------|---------------|
| 1 | ram | 30000 | 2025-01-16 21:08:21 | insert record |
| 2 | shyam | 35000 | 2025-01-16 21:08:21 | insert record |
| 3 | ganesh | 50000 | 2025-01-16 21:10:51 | insert record |
| 3 | suresh | 50000 | 2025-01-16 21:35:48 | update record |
| 3 | suresh | 65000 | 2025-01-16 21:35:48 | update record |
